

Mucoviscidose

By Frederic P. Miller

Alphascript Publishing. Taschenbuch. Book Condition: Neu. Neuware - La mucoviscidose est une maladie génétique, affectant les épithéliums glandulaires de nombreux organes. C'est la maladie génétique létale à transmission autosomique récessive la plus fréquente dans les populations de type européen, alors qu'elle est très rare dans les populations africaines et asiatiques. Elle est liée à des mutations du gène CFTR sur le chromosome 7, entraînant une altération de la protéine CFTR (sigle pour cystic fibrosis transmembrane conductance regulator). Cette protéine est un canal ionique perméable au chlore, au thiocyanate dont la fonction est de réguler le transport du chlore à travers les membranes cellulaires. Son dysfonctionnement provoque une augmentation de la viscosité du mucus et son accumulation dans les voies respiratoires et digestives. La maladie touche de nombreux organes mais les atteintes respiratoires sont prédominantes et représentent l'essentiel de la morbidité. 80 pp. Englisch.

Reviews

It is one of my personal favorite books. It is written in easy terms and never hard to understand. It has been designed in an exceedingly easy way and it is only after I finished reading this publication that I changed my way of thinking.
